

CLAIMS

1. A method for preparing an acrylic-modified chlorinated polyolefin resin, which comprises graft-copolymerizing an acid-modified chlorinated polyolefin resin with a monomer mixture containing a (meth)acrylate ester monomer having one hydroxyl group and the other vinyl monomer in the presence of a cyclic ether compound.
2. The method for preparing an acrylic-modified chlorinated polyolefin resin according to claim 1, wherein the cyclic ether compound is added in the amount of 1 to 100 parts by weight based on 100 parts by weight of the acid-modified chlorinated polyolefin resin.
3. The method for preparing an acrylic-modified chlorinated polyolefin resin according to claim 1, wherein the cyclic ether compound is dioxane and/or 1,3-dioxolane.
4. An acrylic-modified chlorinated polyolefin resin obtained by graft-copolymerizing an acid-modified chlorinated polyolefin resin with a monomer mixture containing a (meth)acrylate ester monomer having one hydroxyl group and the other vinyl monomer in the presence of a cyclic ether compound.

5. A coating composition for polyolefin material, comprising:

at least the acrylic-modified chlorinated polyolefin resin according to claim 4; and

5 to 40% by weight of an acid-modified chlorinated polyolefin resin.
